

Integration of DRR in SRC

Swiss NGO DRR Platform

Learning Event DRR and CCA Mainstreaming, 22 June 2016

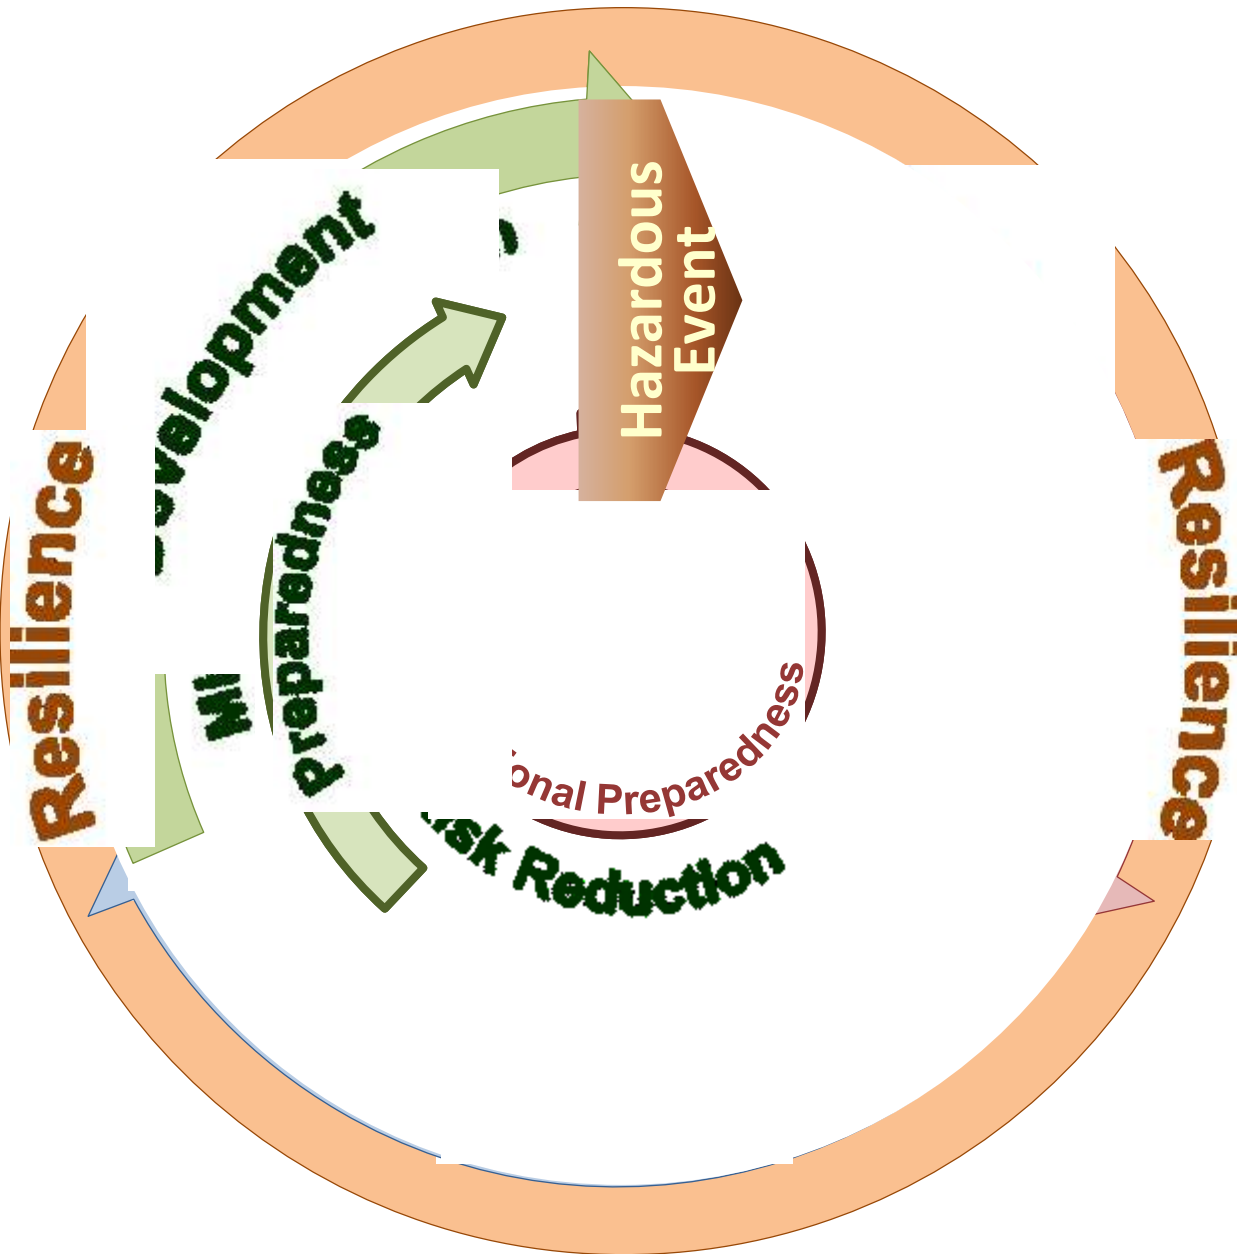

**Croix-Rouge suisse
Schweizerisches Rotes Kreuz
Croce Rossa Svizzera**

Strategic embedding

Conceptual embedding

SRC thematic concepts

Goal of DRM programming

- ### Thematic priorities DRR
- CBDRM
 - Institutional preparedness
 - DRR mainstreaming

DRR Mainstreaming

In response: meet immediate needs and, at the same time, build resilience to future disasters

- existing risks are not worsened,
- new vulnerabilities are not created, and
- future recovery activities are reflected at an early stage.

In recovery: “building-back-safer” approach

- population’s recovery needs to be sustainable in the long term

In development: risk-informed action

- infrastructure is hazard-proof,
- staff of supported institutions is capacitated and equipped to deal with emergencies, and
- communities at risk receive DP and risk mitigation support as per their needs and demands.

Climate Change Adaptation

Climate extremes and variability:

Factored into existing risk assessment tools and subsequent measures

- taking into account a wider range of future climate / extreme events than those reflected in the historical record

Long-term changes in average climatic conditions: In terms of their impact on health and health determinants

- as per SRC institutional scope
